The second Advanced Prostate Cancer Consensus Conference APCCC 2017 did provide a forum for discussion and debates on current treatment options for men with advanced prostate cancer.

Management of patients with advanced prostate cancer: similar to prior conferences, experts identified 10 important areas of controversy regarding the management of advanced prostate cancer: locally advanced disease, biochemical recurrence after local therapy, treating the primary tumor in the metastatic setting, metastatic hormone-sensitive/naïve prostate cancer, nonmetastatic castration-resistant prostate cancer, metastatic castration-resistant prostate cancer, bone health and bone metastases, molecular characterization of tissue and blood.

Recent trends in the management of advanced prostate cancer: Advanced prostate cancer includes a wide spectrum of disease ranging from hormone naïve or hormone sensitive to castration resistant, both containing populations of men who have demonstrable metastatic and non-metastatic states. The mainstay of treatment for metastatic hormone-sensitive prostate cancer is androgen deprivation therapy (ADT).

Prostate cancer management and treatment: Cleveland Clinic: This is an advanced form of radiation therapy that can shorten the length of prostate cancer treatment by several weeks. High doses of radiation (guided by a computer) are delivered directly to the tumor, which reduces the risk to normal tissue.

Progress in the systemic management of advanced prostate: Although combinatorial regimens potentially address multiple tumor vulnerabilities more effectively than monotherapies, most patients with advanced prostate cancer relapse and eventually die as a result of the disease. The experience in prostate cancer over the past decade may be considered a good example of how increased knowledge about acquired mechanisms of resistance (AR based, for example) may offer the opportunity for rational new drug discovery and development.

Controversies in the management of advanced prostate cancer: For advanced prostate cancer, the main hormone treatment against which other treatments are assessed is surgical castration. It is simple, safe and effective, however it is not acceptable to all patients. Medical castration by means of luteinizing hormone-releasing.

Palliative care for advanced prostate cancer: When you have advanced prostate cancer, you can turn to palliative care to manage your symptoms and get the emotional support you need. It can be a big help at a time when you may be looking for.

Advanced (Stage 4) prostate cancer: symptoms and more radiation. In external beam radiation, beams of radiation target the prostate gland or another area of the body. It can help to ease symptoms when prostate cancer has spread to bone. Fatigue is a.
